PNM-2 Network Management Program Released

PNM-2, the second generation of our Payphone Network Manager program, is now available. This versatile management system is compatible with virtually all Elcotel products, providing a universal and efficient means of managing a mixed base of Series 2.5's, 3's, 4's, and 5's, and ACP's. PNM-2 is the most user-friendly and comprehensive management package available from any smartphone manufacturer. Among the many features of PNM-2 are the following:

- Universally controls a mixed base of ACP's and Series 2.5's, 3's, 4's, and 5's through one program. On-screen prompts are uniquely prepared to reflect all Elcotel payphone models.
- Provides the vendor with the ability to design his own status/financial data reports. While PNM-2 supplies a full range of standard reports, the user can *fully* customize reports to meet his specific needs. In addition, PNM-2 can translate its files for use in popular database and spreadsheet programs.
- High speed data link with Series 5 phones cuts PNM-2's on-line polling time. Plus, PNM-2 uses the latest in modem technology which allows the vendor to use PNM-2 with many different interfaces.
- "Redo" feature monitors which phones did not respond to polling and, as a result, prepares a secondary dialing list on those phones; the vendor can then quickly and easily repoll those phones.
- Custom dialing lists control when and how you poll phones for information. Polling lists are created for each product type, and the vendor can pick these lists according to his needs.
- Downloads "Registers and Options" to Series 2.5, 3, 4, and 5 phones, as well as the ACP-1. The Expert Editor function removes the tedious part of programming; it interfaces with the vendor through a simple question-and-answer format, and automatically prepares the programming instructions for downloading to the payphones and ACP's.
- Supports all current phone features, such as SMDR and service alarms, the "converse" diagnostic tool, programmable schedule polling, and much more.

PNM-2 will be provided to Series 5 customers at no charge. All other PNM users can receive PNM-2 for the standard \$35.00 upgrade charge. As an added incentive for customers to begin using PNM-2, Elcotel has reduced the "first time purchase" price to only \$99.00. Contact your distributor or Elcotel, Inc. for additional details.
