Battery Charger for Series 5 Phones

For those customers who have the Series 5 line-powered phone, we now have available the BCT-1 battery charger. While the lifespan and overall quality of the Series 5 batteries makes it unlikely that you will ever need the BCT-1, we are making it available for those who desire it.

The BCT-1 can charge up to four lead acid batteries at one time, limit the current output, and show "go" or "no go" (via LED charge status indicators) for loaded and open circuit tests. The BCT-1 is powered by a UL-approved A.C. transformer (provided).

BCT-1 comes with complete directions for use. It has a one year warranty that covers defects in materials and workmanship.
